Problem Statement #55 — Book Club Reading Challenge & Discussion Portal

Target Stakeholders / Actors: Club Member, Discussion Lead

Functional Requirements (FR-001 to FR-005)

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
FR-001	Functional	The system shall hide content inside spoiler-tagged discussion comments until the user explicitly clicks to reveal it or marks that chapter as read.	High	Pass: Spoiler text is masked with a blur filter and not shown in search previews. Fail: Spoiler content is exposed in search preview or comment list before reveal.	Prevents unwanted plot exposure and protects the reading experience for members who are behind on chapters.	Given requirement. Consider clarifying whether marking a chapter as read auto-reveals all spoilers for that chapter or only within that thread.
FR-002	Functional	The system shall allow a Club Member to set and update a personal page-count reading goal for the current book.	High	Pass: Goal value entered by the member is saved and reflected on their profile within 2 seconds. Fail: Goal is not saved or does not persist after page reload.	Personal goals drive member engagement and let the portal track individual reading progress.	Clear and testable. Should specify a valid range for the goal (e.g., 1 to total page count) to avoid invalid entries.
FR-003	Functional	The system shall allow a Club Member to log pages read and display progress toward their goal as a percentage.	High	Pass: After logging pages read, the progress bar updates to the correct percentage (pages read / goal * 100). Fail: Percentage shown does not match the logged values.	Visual progress tracking motivates continued participation in the reading challenge.	Testable via a simple calculation check. Recommend capping displayed progress at 100% if a member logs

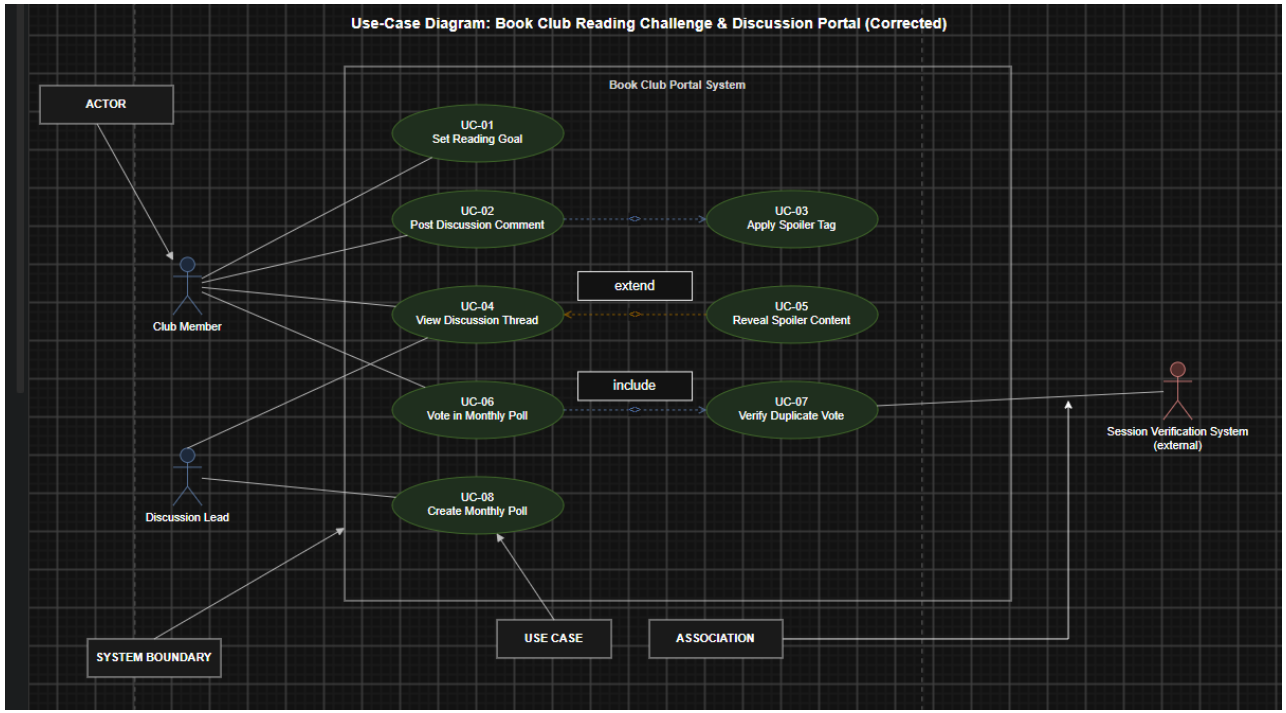

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
						more pages than their goal.
FR-004	Functional	The system shall allow a Discussion Lead to create a chapter-specific discussion thread that members can reply to.	Medium	Pass: A new thread created by the Discussion Lead appears in the correct chapter section and accepts member replies. Fail: Thread is not visible to members or replies cannot be posted.	Chapter-scoped threads keep discussion organized and directly tied to reading progress.	Fine as written. Might raise priority to High if chapter threads are core to the discussion feature rather than a secondary function.
FR-005	Functional	The system shall allow a Club Member to cast one vote per monthly poll for the next book selection from a list of nominated titles.	High	Pass: Vote is recorded against the member's account and the tally updates by 1. Fail: Member is able to submit more than one vote in the same poll.	Enables fair, democratic selection of the next book for the club.	Overlaps with NFR-001's duplicate-vote prevention; keep this FR focused on the voting action itself and let the NFR own the security/session mechanism.

Nonfunctional Requirements (NFR-001 & NFR-002)

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
NFR-001	Nonfunctional (Performance & Security)	Monthly poll voting results must prevent duplicate votes using user session verification and update tallies in real-time.	High	Pass: Benchmarking tests confirm target latency (tally updates within 1 second of a vote) and confirm no duplicate vote is accepted per session/user under simulated peak load. Fail: Duplicate votes are accepted or tally update exceeds target latency.	Ensures poll integrity and a responsive experience during high-traffic voting periods.	Given requirement. Recommend specifying the exact peak-load figure (e.g., concurrent voters) used in benchmarking for

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
						a fully measurable test.
NFR-002	Nonfunctional (Usability)	The system shall render any chapter discussion thread with up to 500 comments in under 3 seconds on a standard broadband connection.	Medium	Pass: Load-time test on a 500-comment thread completes rendering in under 3 seconds. Fail: Rendering exceeds 3 seconds.	Keeps discussion threads responsive as club engagement and comment volume grow.	Clear and testable. Define 'standard broadband connection' with a concrete Mbps figure so the test is reproducible.

UML-USE CASE DIAGRAM

Use-Case Flow Specification

Book Club Reading Challenge & Discussion Portal

Use Case	Cast Vote in Monthly Book Poll (UC-04)
Primary Actor	Club Member
Secondary Actor	Discussion Lead (initiates/closes the poll)
Trigger	Club Member opens the active monthly "Next Book" poll from the portal dashboard.

Preconditions:

• The Club Member is authenticated and has an active session.
• A monthly book poll has been created and published by the Discussion Lead and is currently open (before the stated closing date/time).
• The Club Member has not already cast a vote in the current poll instance.

Postconditions:

Success: The member's vote is recorded exactly once, the poll tally is updated in real time, and the member's session is flagged as "voted" for this poll instance.
Failure: No new vote is recorded; the existing tally remains unchanged.

Main Success Scenario

1. Club Member selects "Vote Now" on the active monthly poll from the dashboard.
2. System verifies the member's session and confirms the poll is still open.
3. System retrieves and displays the list of nominated books for the current cycle.
4. Club Member selects one nominated book as their choice.
5. Club Member confirms the selection by clicking "Submit Vote."
6. System checks the member's session record to confirm no prior vote exists for this poll instance.
7. System records the vote, links it to the member's session token, and updates the live tally.
8. System marks the member's session as "voted" for this poll instance.
9. System displays a confirmation message showing the member's selected book and the updated live results summary.
10. Use case ends successfully.

Alternate Flow

6a. Duplicate Vote Attempt

6a. System detects, via session verification, that the member has already voted in the current poll instance.

6b. System rejects the submission and displays a "You have already voted this month" message.

6c. System redirects the member to the live results summary view instead of the ballot.

6d. Use case ends without altering the existing tally.
