Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

Name:Ananya Suresh

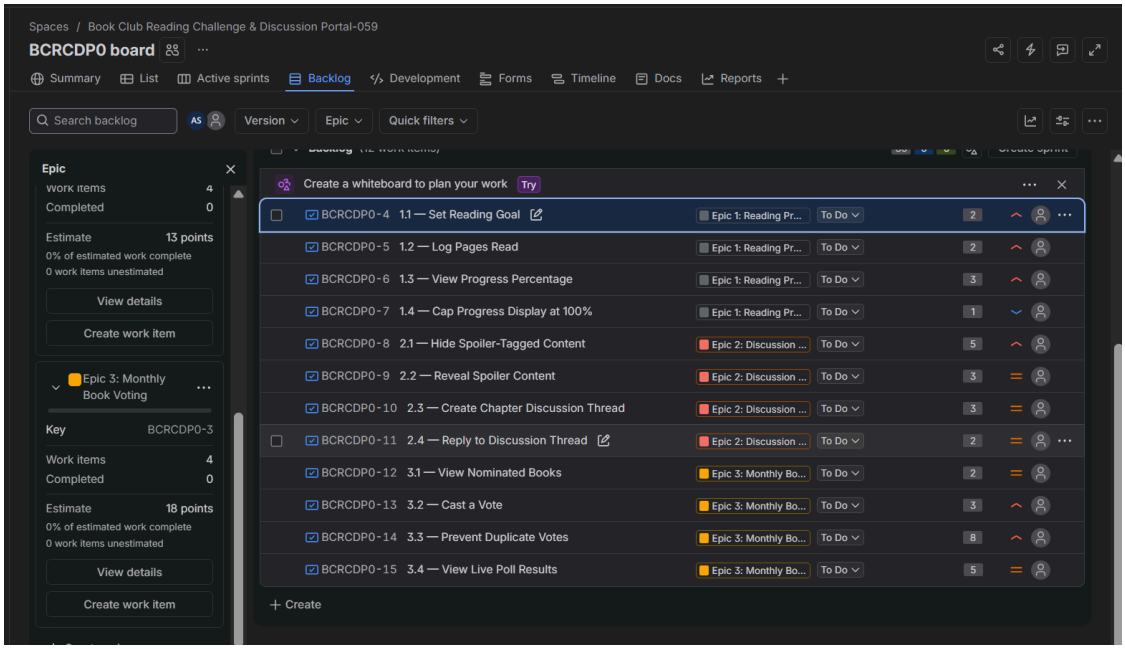

SRN:PES2UG24CS059

PROBLEM STATEMENT:Book Club Reading Challenge & Discussion Portal

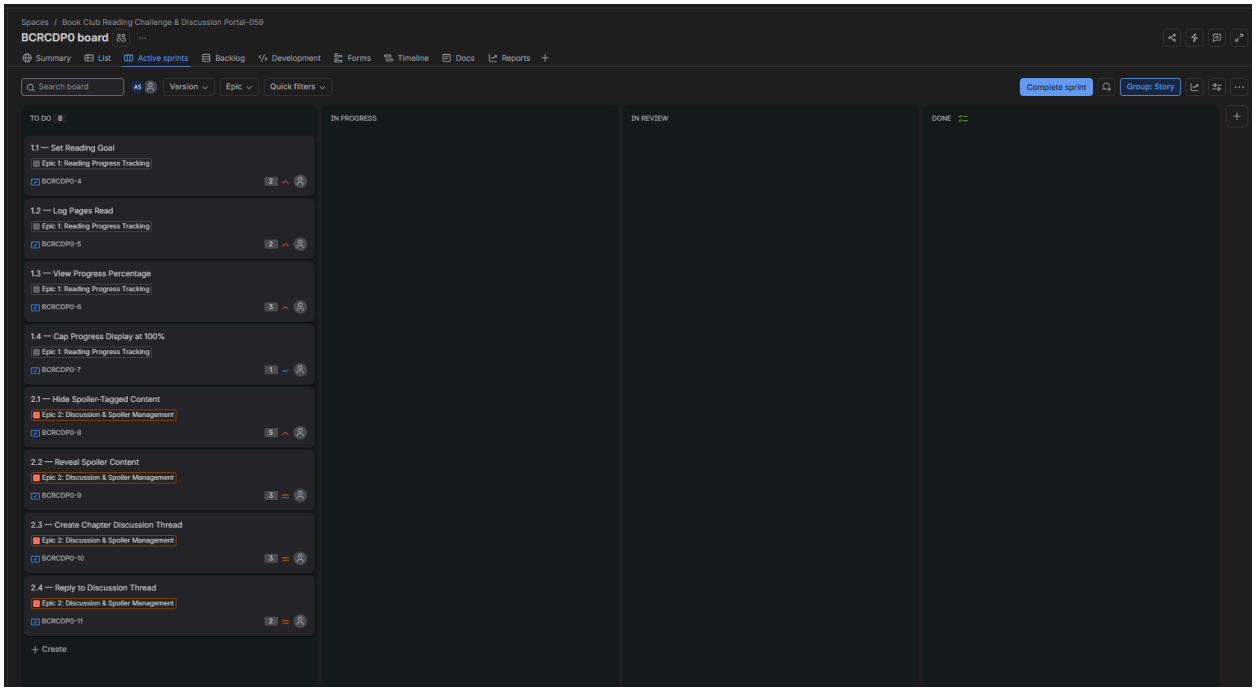

1.Jira backlog with Epics and User Stories.

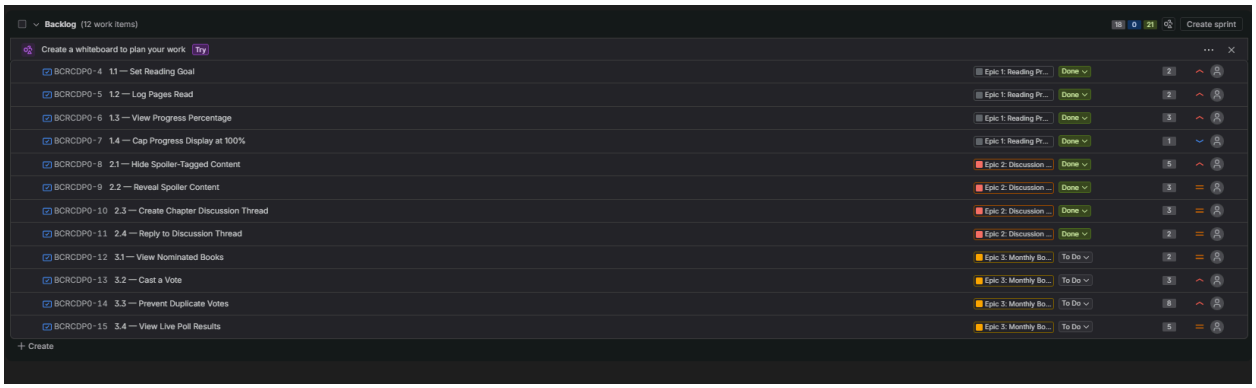

2.Story point assignments.

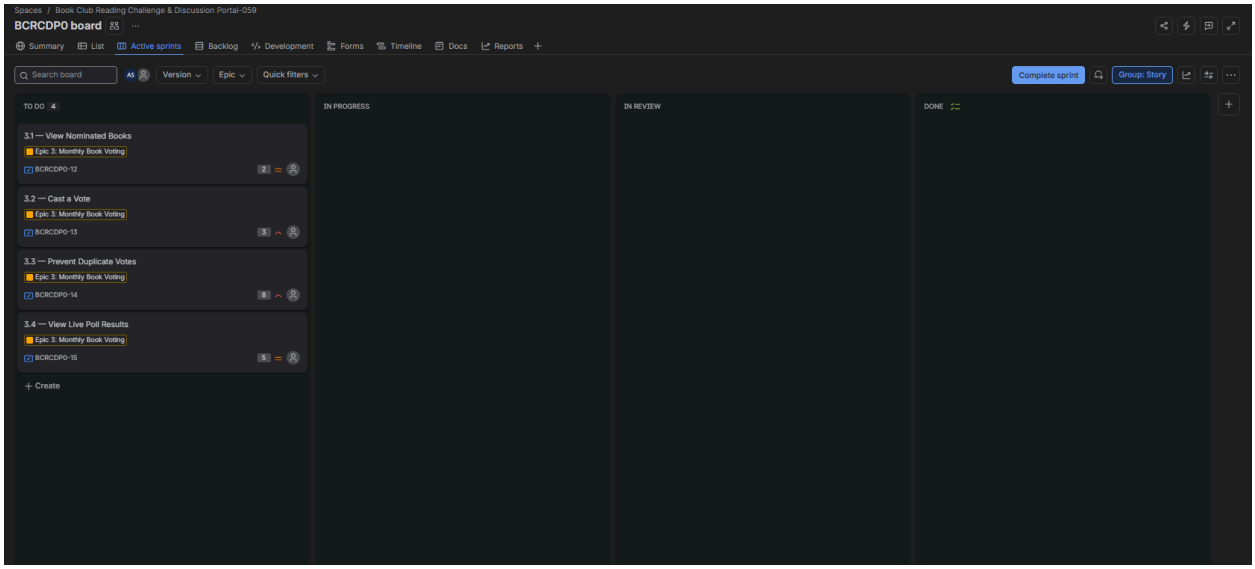

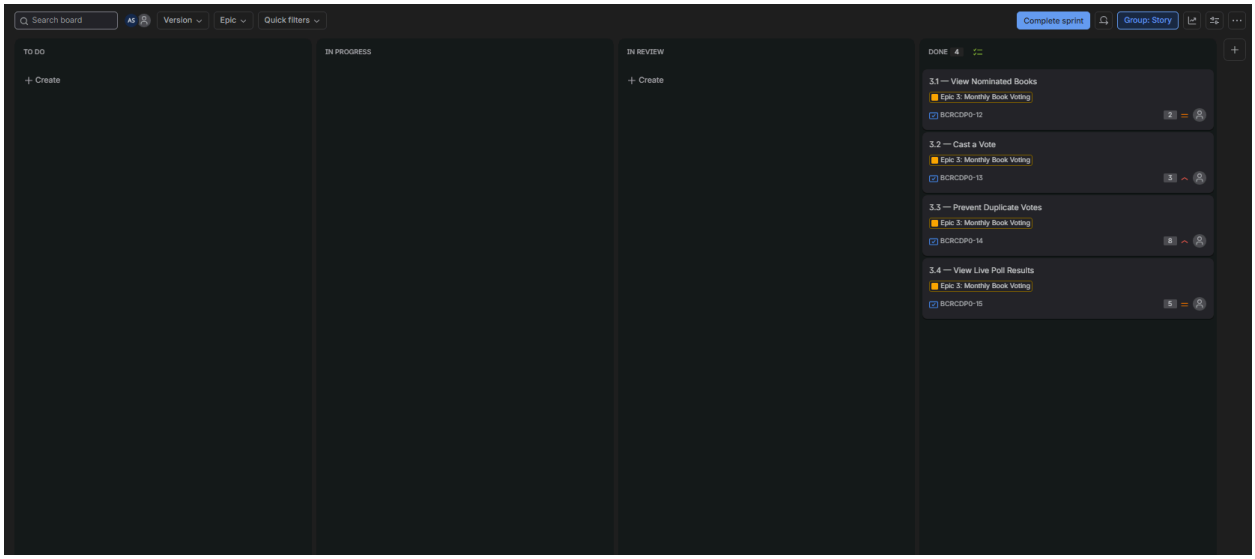

3.Sprint board (Active Sprint view).

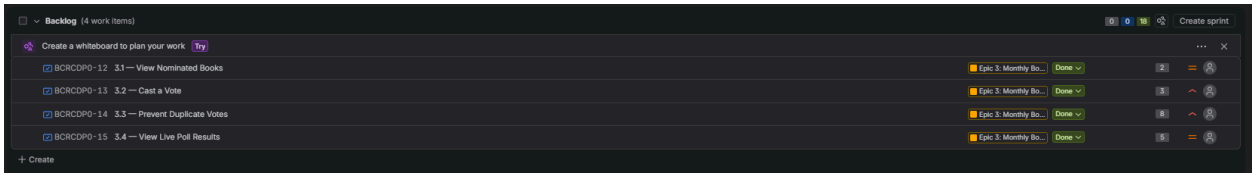

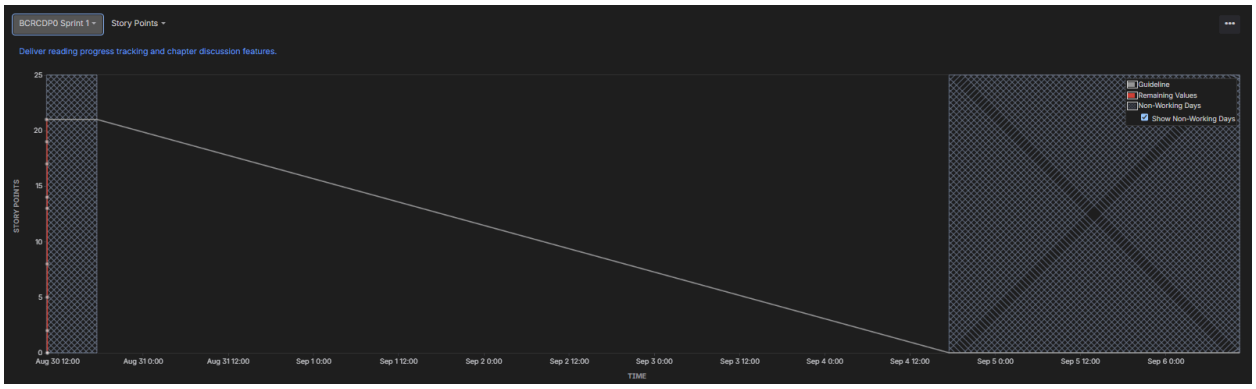

3.Sprint board (Active Sprint view).

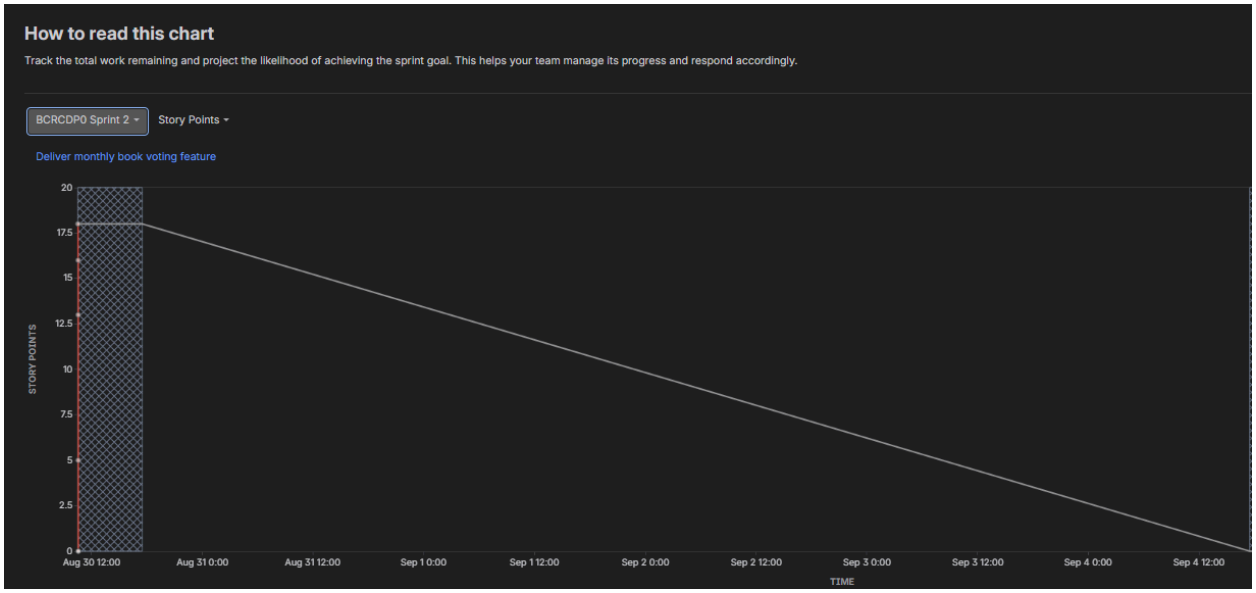

4. Burndown Chart.

REFLECTION QUESTIONS:

1. Did your estimations reflect the actual effort?
Since this was a simulated sprint rather than real development work, actual "effort" wasn't measured in hours but the relative sizing held up logically. Simple stories (Set Reading Goal, View Nominees) stayed at 2 points, while genuinely more complex ones (Prevent Duplicate Votes at 8, tied to session verification and real-time tallying) were correctly weighted higher. In a real team setting, we'd only know if these held true once actual coding revealed unexpected complexity.

2.Was your backlog well-prioritized?
Yes priorities matched the original functional requirements' priority levels (High for core features like goal-setting, spoiler-hiding, and voting; Medium for supporting features like discussion threads). Grouping by Epic (Reading Progress, Discussion, Voting) also ensured each sprint delivered a complete, usable feature area rather than a scattered mix of unrelated tasks.

3. How did your simulated sprint align with your plan?
The plan was followed exactly: Sprint 1 covered Epic 1 + Epic 2 (21 points), Sprint 2 covered Epic 3 (18 points), split roughly evenly. Both sprints completed all planned stories with no scope changes during the sprint.

4. What insights did the burndown chart give about your team's capacity?
The burndown chart showed that our team had a consistent and manageable capacity during both sprints. In Sprint 1, we started with around 21 story points, while Sprint 2 started with around 18 story points, and in both cases the remaining work steadily decreased toward zero by the end of the sprint. This indicates that we were able to complete the planned tasks within the available time without significant delays or overloading the team
